

A B S T R A C T

A nonaqueous electrolyte secondary battery
characterized as using a mixture of a first oxide and a
5 second oxide for its positive electrode material. The first
oxide is a spinel oxide consisting substantially of lithium,
manganese, a metal other than manganese, and oxygen. The
second oxide is different in composition from the first
oxide and consists substantially of lithium, nickel, cobalt,
10 a metal other than nickel and cobalt, and oxygen.
